DETAILED ACTION

1. The Amendment received on June 26, 2006 has been entered into the record.

Allowable Subject Matter

2. **Claims 1-5** are allowed.
3. The following is an examiner's statement of reasons for allowance:

As to **claim 1**, the prior art of record, taken alone or in combination, fails to disclose or render obvious in an overlay target 'where the difference between the offset bias of the first test pattern and the offset bias of the second test pattern is substantially equal to the line pitch divided by four whereby the combined optical response to the measurement of the first and second test patterns is sensitive to all values of overlay alignment,' in combination with the rest of the limitations of **claims 1-5**.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments, see Remarks pages 4-6, filed June 26, 2006, with respect to the previous rejection of **claims 1-5** under 35 U.S.C. 102(e) (**claims 1-4**) and 35 U.S.C. 103(a) (**claim 5**) with Yang et al. (6,982,793) have been fully considered and are persuasive.

Specifically, the demonstration of a nonobvious special result from having an offset difference of one fourth of the grating period and that Yang teaches away from having an offset difference optimally at one half the grating period were found persuasive (remarks pages 5-6 with regards

to MPEP 2144.05, and Examiner would like to note also that Yang does not disclose the offset difference of one fourth of the grating period with sufficient specificity (MPEP 2131.03 II.) since he discloses offsets of 5 percent to 40 percent and optimally at 25 percent at column 10, lines 39-45) The previous rejections under 35 U.S.C. 102(e) and 35 U.S.C. 103(a) have been withdrawn.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

"Phase-Sensitive Overlay Analysis Spectrometry," March 1, 1990, IBM Technical Disclosure Bulletin, vol. 32, Issue No. 10A, pp. 170-174.
